

**Role:** Project Civil Engineers

**Location:** Glasgow & Manchester

**Salary:** Negotiable

Woolgar **Hunter** are a design led Civil and Structural Engineering consultancy delivering projects across the UK. The Head Office of 55+ staff is based in Glasgow, with a busy growing design studio in Manchester.

As part of our continued success we are seeing a significant growth in our Civil Engineering/ Development Infrastructure workload and are looking to expand this team, which currently comprises 12 technical staff across all levels. The project growth is evolving both in Scotland and the north of England, across various sectors, including industrial & logistics, commercial offices, housing and educational campuses.

We are therefore looking to appoint passionate, talented, and enthusiastic Project Civil Engineers to join our Teams in Glasgow & Manchester to work on a range of live projects. The successful candidates will have several years of engineering design experience and ideally be working toward chartership.

Candidates will be technically proficient, with a solid educational background, and keen to play a key role as part of an enthusiastic and active team who are driven by quality design, with a focus on sustainable engineering and drainage solutions, and a commitment to successful project delivery. Candidates should be proficient in roads, drainage and earthworks design, ideally utilising CIVILS 3D and Microdrainage software, however training in these packages can be provided as required.

In return, we provide opportunity to work on a broad range of project types and scales, the majority of which are relatively local and likely to progress to construction stage, therefore allowing excellent experience. We work within a friendly studio environment that is both creative, passionate, practical, and design focused in its approach. The role will report to Senior Engineers and Project Directors and will work closely with a professional and experienced team of senior engineers, engineers and technicians.

We would expect the candidate to be working toward chartership and would provide support through our Training Agreement and through mentoring. As part of the package, dedicated 'Development Time' will be granted to help enable professional development and progression to chartership.

This is an excellent opportunity with a successful engineering consultancy, and you will be rewarded with a competitive salary and benefits package, with career-propelling responsibilities and projects.
